

SKF PHG A46

Classical Wrapped V-Belt — Concise Technical Sheet

Manufacturer	SKF
Product designation	PHG A46
Belt section	13/A (Classical A section)
Pitch / working length	1200 mm
Inside length	1168 mm
Width	13 mm
Height	8 mm

This document is a compact extraction of the SKF Power Transmission Products catalogue for the PHG A46 belt. It is intended as a practical reference for CAD modelling and engineering documentation.

Primary source: SKF, Power Transmission Products catalogue. The catalogue identifies the A46 as section 13/A, with 1200 mm pitch length, 1168 mm inside length, 13 mm width and 8 mm height.

1. Product Specification

The following values are directly extracted from the SKF catalogue entry for PHG A46. No alternative manufacturer dimensions are substituted.

Parameter	SKF value
Product designation	PHG A46
Section	13/A
Belt type	Wrapped classical V-belt
Pitch / working length	1200 mm
Inside length	1168 mm
Width (w)	13 mm
Height (h)	8 mm

Length nomenclature

In the SKF table, the A46 entry appears under the 13/A section. The listed dimensions are 1200 mm pitch length and 1168 mm inside length. The nominal designation is PHG A46.

Catalogue entry (transcribed)

Section	Pitch length	Inside length	Size	Designation
13/A	1200 mm	1168 mm	13 × 8 mm	PHG A46

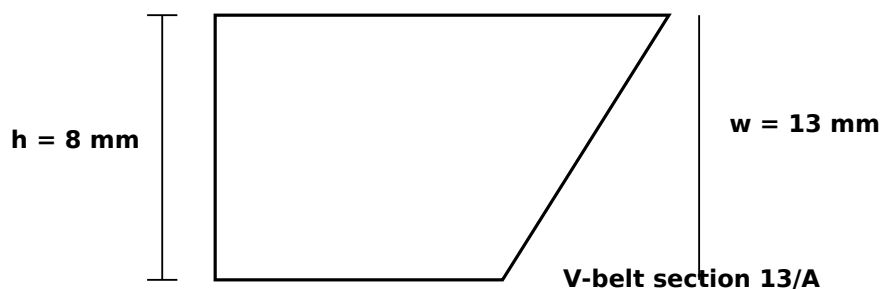

Source note: SKF's catalogue page uses the classical-belt designation convention in which the classical belt length designation is based on inside length. The catalogue also states that SKF belts conform to commonly used ISO, BS, RMA or DIN conventions.

2. CAD Modelling Reference

For a simplified SolidWorks model, the most important dimensions are the belt cross-section and the closed belt length. The SKF catalogue supplies the section size as 13/A with $w = 13$ mm and $h = 8$ mm.

Cross-section

Simplified CAD cross-section (not a manufacturer drawing)

The catalogue provides w and h ; it does not provide a complete 3D surface profile in this table.

CAD item	Value to use
Section	13/A
Top/overall width	13 mm
Section height	8 mm
Closed belt length for layout	1200 mm pitch length
Inside length	1168 mm
Product name	SKF PHG A46

Important: the schematic above is only a CAD modelling aid. It is not a reproduction of SKF's detailed belt construction. The catalogue table gives the section dimensions and lengths, but not the complete side-wall radii, cord position, rubber-layer geometry or a native CAD model.

3. Engineering & Assembly Notes

This page keeps only the information useful when applying the PHG A46 in a mechanical assembly. The values below are not additional manufacturer specifications unless explicitly marked as such.

Manufacturer-derived data

Item	SKF catalogue value
Designation	PHG A46
Section	13/A
Pitch length	1200 mm
Inside length	1168 mm
Width	13 mm
Height	8 mm

For your SolidWorks assembly

Use PHG A46 as the component designation. For the belt cross-section, use 13 mm width and 8 mm height. For belt-drive layout, use the SKF 1200 mm pitch length as the catalogue reference value. Do not substitute the 1201.4 mm value from a separate design calculation unless you intentionally decide to model a non-SKF length.

What is not specified in the cited A46 table

- Complete 3D CAD geometry
- Exact side-wall radii
- Cord location
- Detailed rubber-layer construction
- Manufacturer-specific 3D surface profile
- Pulley groove geometry

Note on pulley groove angle: this A46 table does not specify the pulley groove angle. Do not infer a pulley groove angle from the 13 × 8 mm belt dimensions alone.

4. Source & Final Reference

The primary source used for this sheet is SKF's Power Transmission Products catalogue. The searchable catalogue entry lists the A46 belt as follows:

SKF catalogue field	PHG A46
Section	13/A
Pitch length	1200 mm
Inside length	1168 mm
Width	13 mm
Height	8 mm
Designation	PHG A46

Verification: the SKF catalogue search result explicitly shows the row “13/A | 1200 | 1168 | 46.00 | 13 | 8 | PHG A46”.
